2019 Summer Workshop

Wenheng Gao, Updated: Oct 28, 2020

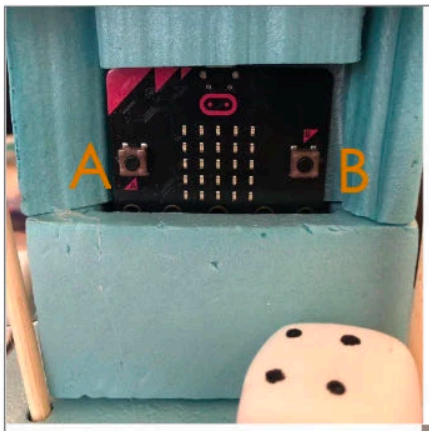
In the summer of 2019, I attended a two-week workshop led by professor Stefania Druga, MIT, to complete 1-2 basic interaction design activities and experiences.

Stefania taught us how to brainstorm and how to find the direction of research and production projects. I touched the process of human-computer interaction, how to combine a simple code with product design.

This is our group photo after the workshop :)

^ This is ME :)

Here are two of the little inspiration project we did:



I designed a little game machine which can change Arabic number by pressing the little button on the robot , we get the idea from mini slot machines

IWhen people press the either of one side, the displayer will shows a number randomly, and we press the other side, a new number will be on the displayer randomly again. The two Numbers are automatically compared and the final wining and loosing will display depends on B' s number.
